

20260417 On Surveillance as a State Sponsored PSYOP Violating Posse Comitatus Act

◆ AI Overview

The Posse Comitatus Act (18 U.S.C. § 1385), enacted in 1878, prohibits the federal military (Army, Air Force, and via 2021 amendments, Navy/Marine/Space Force) from engaging in domestic law enforcement, such as policing or seizing property, without constitutional or congressional authorization. It limits military involvement in civilian affairs. [Wikipedia +3](#)

Purpose

- **Preventing Military Rule:** The act aims to prevent the military from being used as a personal police force for the executive branch and upholds the tradition of civilian control over the armed forces.

JOINT PUBLICATION 3-28:

b. **Prohibited Direct Assistance.** Direct assistance and participation by military personnel in the execution and enforcement of the law is the heart of the prohibition of the PCA. Impermissible direct assistance by military personnel in civilian law enforcement activities is addressed in DODI 3025.21, *Defense Support of Civilian Law Enforcement Agencies*. Prohibited direct assistance by military personnel includes, among other activities:

- (1) Interdiction of a vehicle, vessel, or aircraft.
- (2) A search or seizure.
- (3) An arrest, apprehension, stop and frisk, interviews and questioning of potential witnesses, or similar activity.
- (4) Use of military personnel for surveillance or pursuit of individuals or as undercover agents, informants, investigators, or interrogators.

III-3

Chapter III

- (5) Using force or physical violence, brandishing a weapon, discharging or using a weapon, or threatening to discharge or use a weapon except in self-defense; in defense of other DOD persons in the vicinity; or in defense of non-DOD persons, including civilian law enforcement personnel, in the vicinity when directly related to an assigned activity or mission.

AIR FORCE DOCTRINE DOCUMENT 2-5.4:

information-in-warfare. Involves the Air Force's extensive capabilities to provide global awareness throughout the range of military operations based on integrated intelligence, **surveillance** and reconnaissance (ISR) assets; its information collection/dissemination activities; and its global navigation and positioning, weather, and communications capabilities. Also called **IIW**. (AFDD 2-5)

JOINT PUBLICATION 3-13.2: PSYCHOLOGICAL OPERATIONS

Intelligence, **surveillance, and reconnaissance support.**

PSYOP rely on theater intelligence, **surveillance**, and reconnaissance (ISR) operations to provide intelligence products based on a whole of government approach that occurs within the intelligence community. ISR assets also are critical in collecting data to confirm or deny PSYOP MOEs.

Communications between commands that are planning and executing PSYOP are necessary for effective use of capabilities. A joint PSYOP communications plan should be prepared to ensure that communications systems are compatible and adequate.

(Note that machines, cars being driven by American citizens, while directed by spies within the Trump administration and federal intelligence agencies, are being continuously paraded past my home the entire time that I am compiling this document. I am being given the distinct impression that 'faceless' individuals are monitoring my work in real-time, and are unleashing immediate consequences against my life as a response to this work product. What do you believe that the overall impression of my possible development of life, liberty, and pursuit of happiness will become in this type of surveillance state of unlawful treasonous psychological warfare against American citizens?)

special reconnaissance. Reconnaissance and **surveillance** actions conducted as a special operation in hostile, denied, or politically sensitive environments to collect or verify information of strategic or operational significance, employing military capabilities not normally found in conventional forces. These actions provide an additive capability for commanders and supplement other conventional reconnaissance and surveillance actions. Also called SR. (JP 1-02. SOURCE: JP 3-05)

intelligence, surveillance, and reconnaissance. An activity that synchronizes and integrates the planning and operation of sensors, assets, and processing, exploitation, and dissemination systems in direct support of current and future operations. This is an integrated intelligence and operations function. Also called ISR. (JP 1-02. SOURCE: JP 2-01)

(2) To create measurable effects in the human environment, commanders need to ensure that the information requirements for PSYOP and other information support activities are reflected in the collection plan; allocation of intelligence, surveillance, and reconnaissance (ISR) assets; and the codified output of selected elements within the joint force battle rhythm.

h. **Intelligence, Surveillance, and Reconnaissance.** Theater ISR CONOPS are based on a coherent collection strategy that fully integrates and optimizes the use of all

How Being Watched Changes How You Think

We live in an era of constant surveillance. Psychology research shows how this might change how we perceive the world—even unconsciously

BY SIMON MAKIN EDITED BY ALLISON PARSHALL

UNSEEN CONSEQUENCES

Surveillance, then, seems to shift our social processing into high gear. “The conclusion would be that being watched drives this hardwired survival mechanism into overdrive,” Seymour says. “You’re in fight-or-flight mode, which is taxing on the brain.”

This constant surveillance could tax cognition in ways that we don’t yet understand. The faculties compromised by surveillance “are those that allow us to focus on what we’re doing: attention, working memory, and so on,” Belletier says. “If these processes are taxed by being monitored, you’d expect deteriorating capacity to concentrate.” This body of research suggests that bringing more surveillance into workplaces—usually an attempt to boost productivity—could actually be counterproductive. It also suggests that online testing environments, where students are watched through webcams by human proctors or AI, could lead to lower performance.

“We didn’t have as much surveillance and social connections 50 years ago, so it’s a new societal context we’re adapting to,” Colombatto says. “It’s important to think about how this is going to change our cognition, even in unconscious ways.”

INSIDE OF THE INCEPTION LABYRINTH OF SHUTTER ISLAND
(JUST ANOTHER NAZI PARADISE)

“Those people, and machines, constantly circulating around my home and life? Oh, those are my gardeners, my house guests, my security personnel. Those are my protectors, they are called the ‘Intelligence Agencies’ because they are allowed to steal all of my intelligence while making sure that I lose all ability to think for myself.”

(Satan) blessed America!

Criminals within the United States government and military are conducting a large scale, *TREASONOUS*, mass-surveillance, PSYOP over America (and the world) to empower them to do anything that they want while preventing us from even *thinking* about the truth.
